SYSTEM ARCHITECTURE
DATABASE & TRUST DIAGRAMS

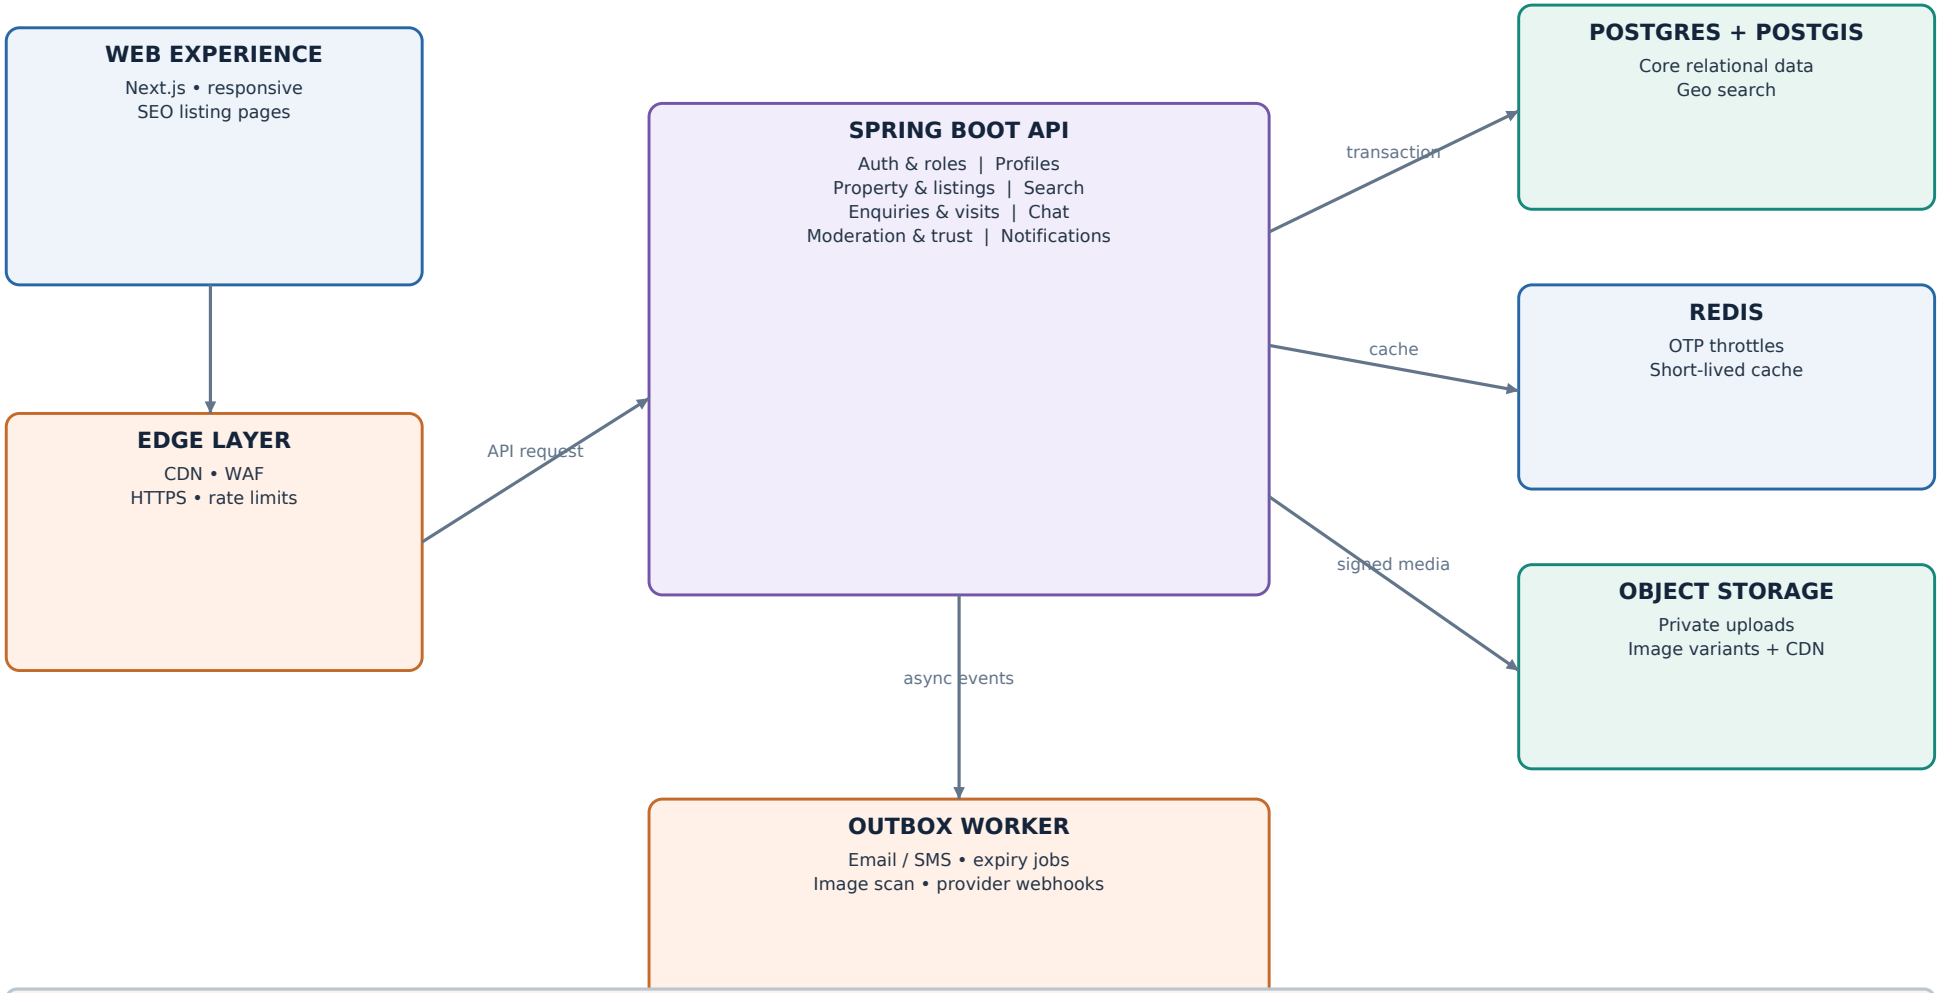

A visual development guide — diagrams, maps, lifecycle and screen relationships.

No source code or long technical prose.

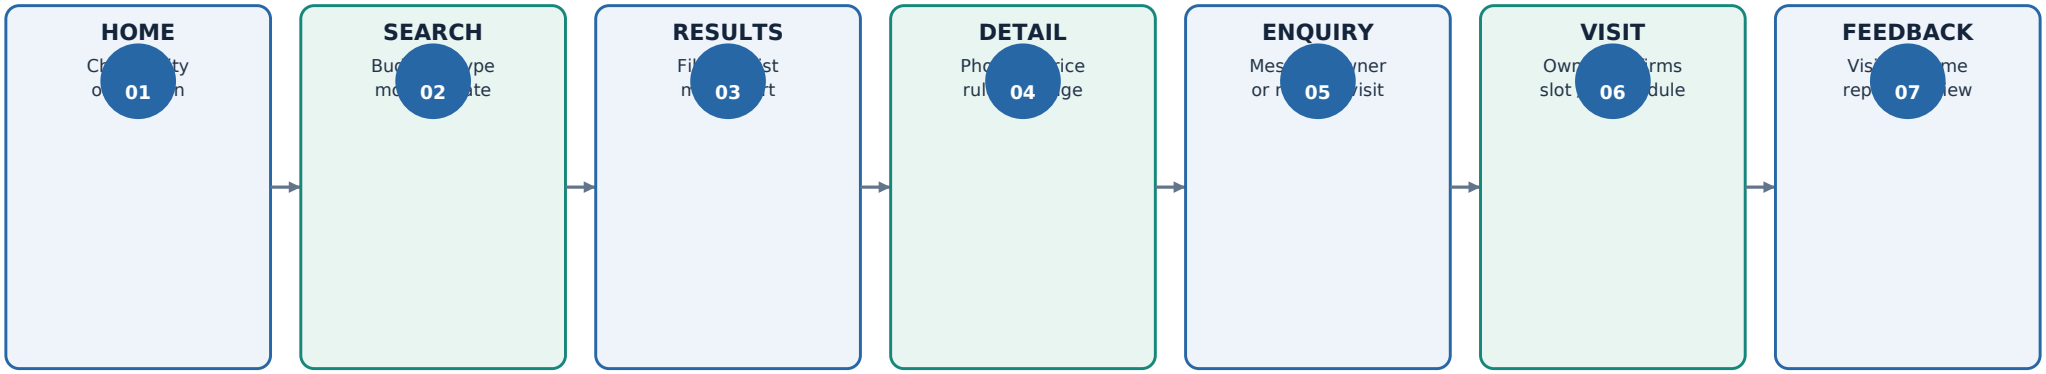

Version 1.1 • 01 November 2026 • India-first marketplace

*Payment provider is a later release. MVP should launch as discovery + enquiry + visit scheduling, not rent collection.

Keep one deployable backend initially. Split services only when scale, team ownership or independent release cadence makes it worthwhile.

Guest can browse public approved listings. Sign-in is required for saving, contacting, requesting visits and reporting.

SEARCH FILTERS

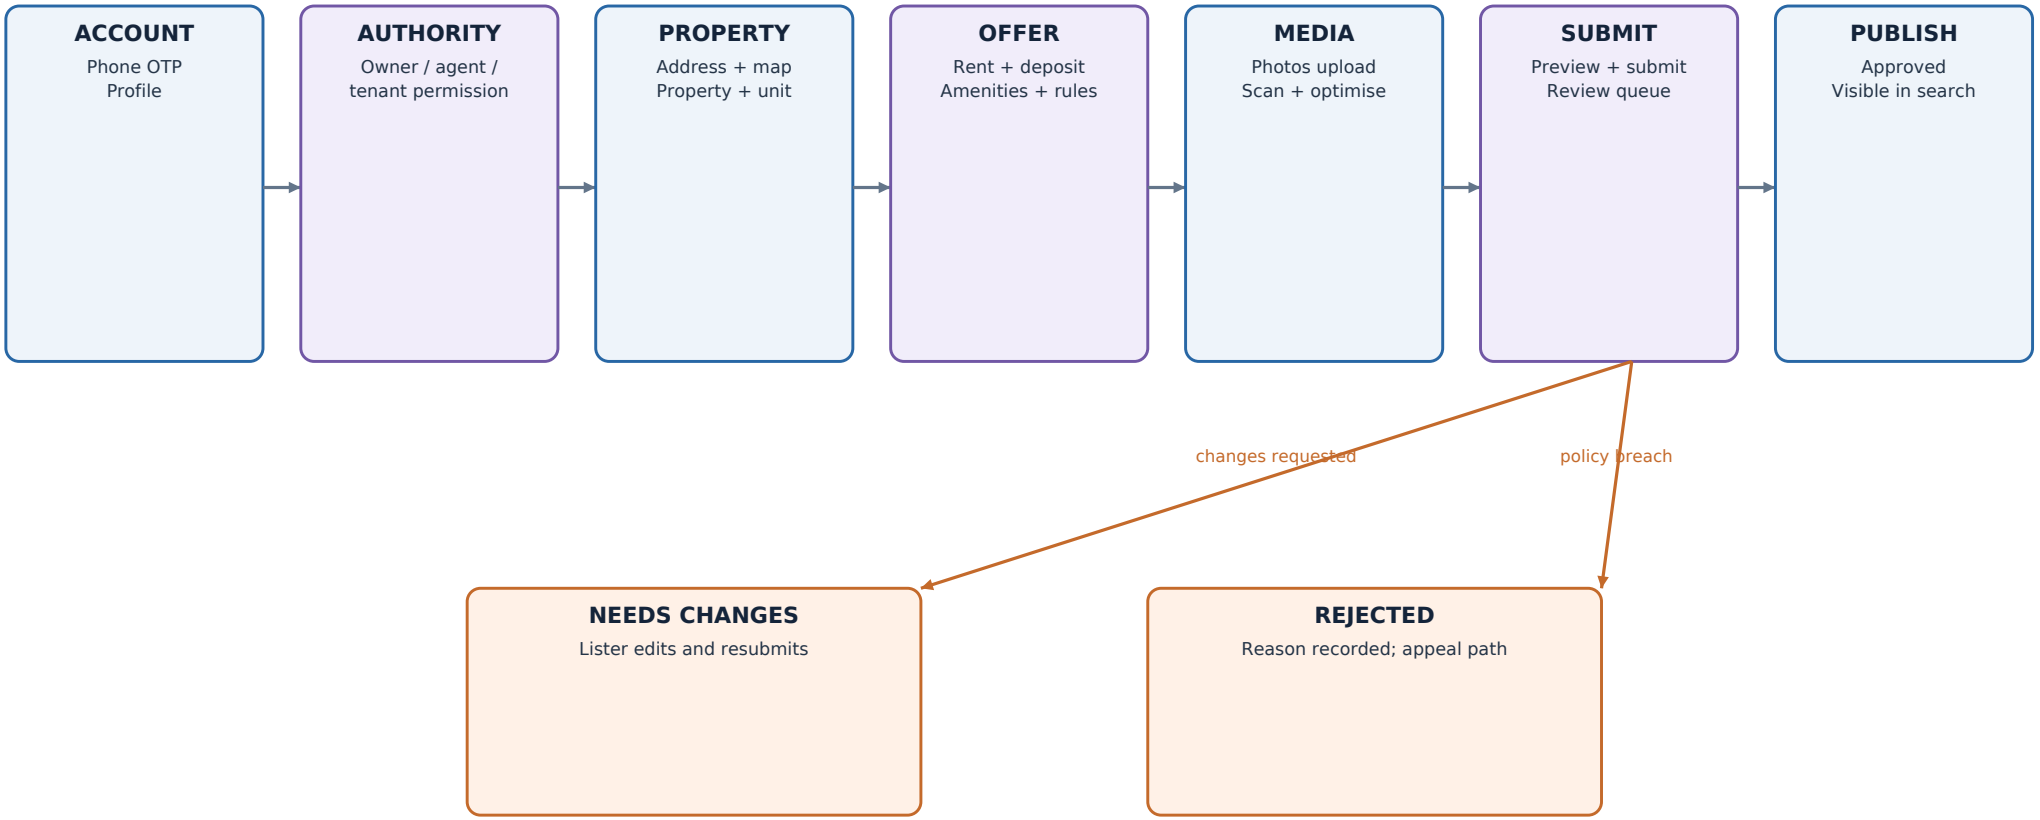

City • locality • rent • type

TRUST SIGNALS

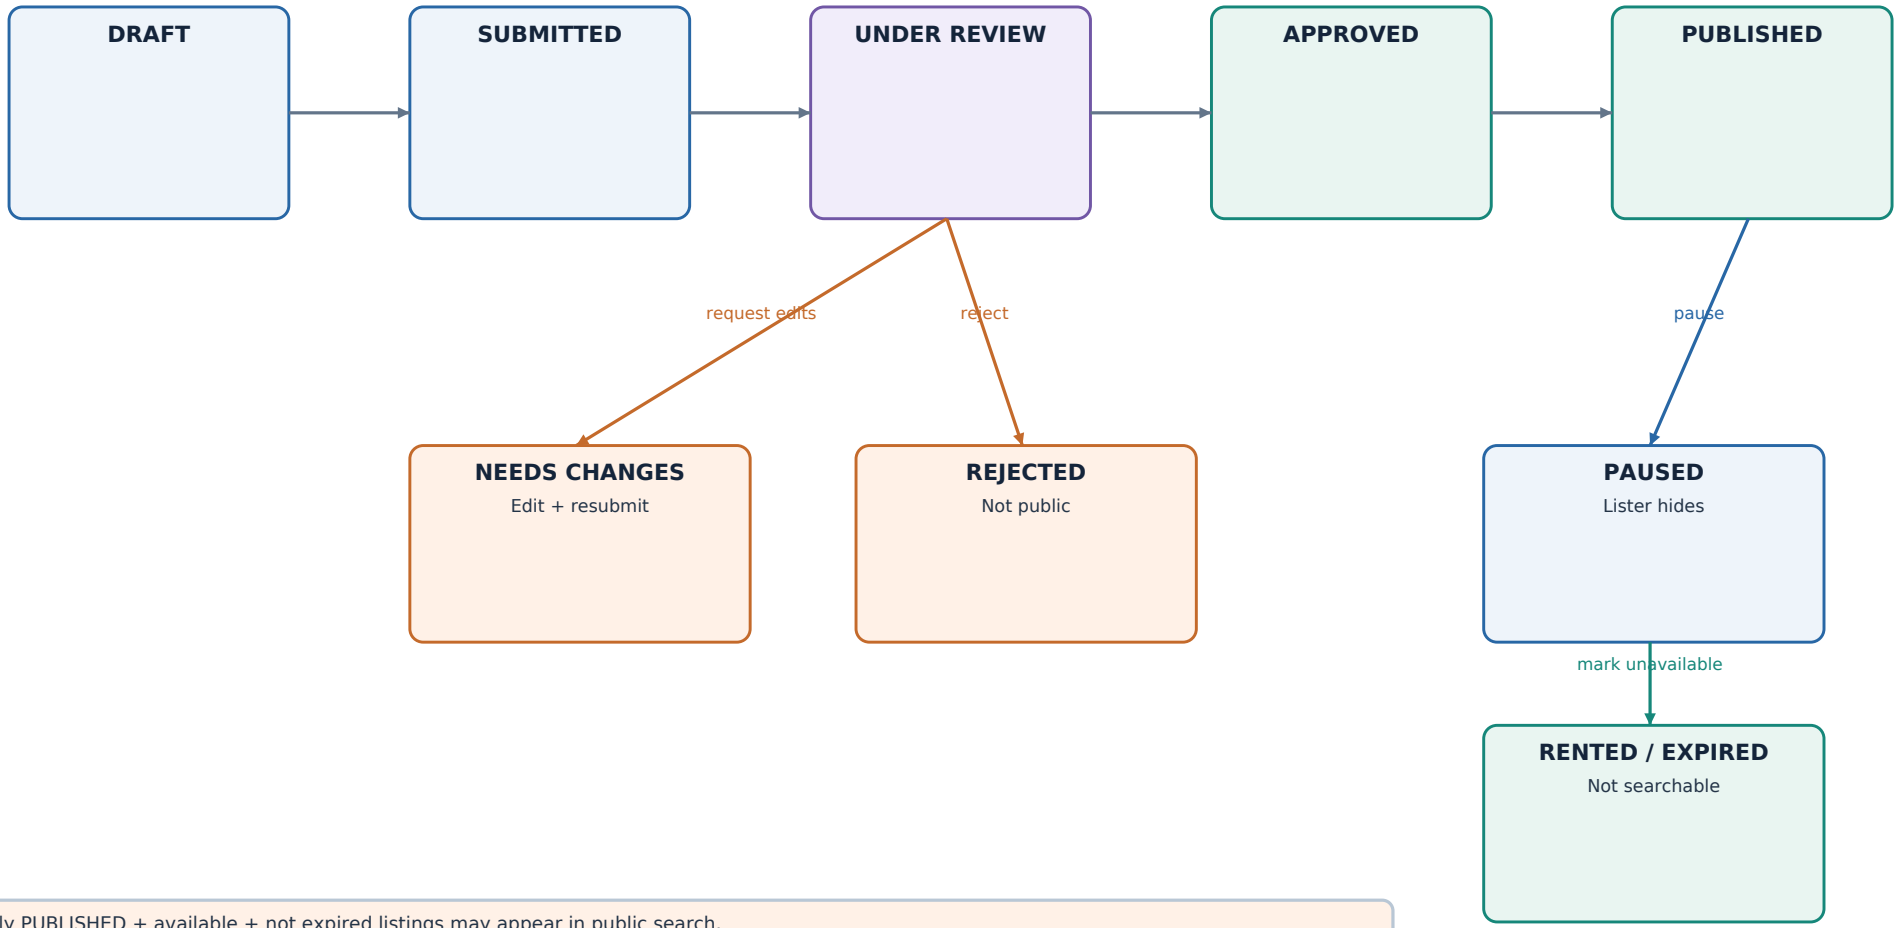

Scope-specific badges

SAFETY ACTIONS

Block • report • help

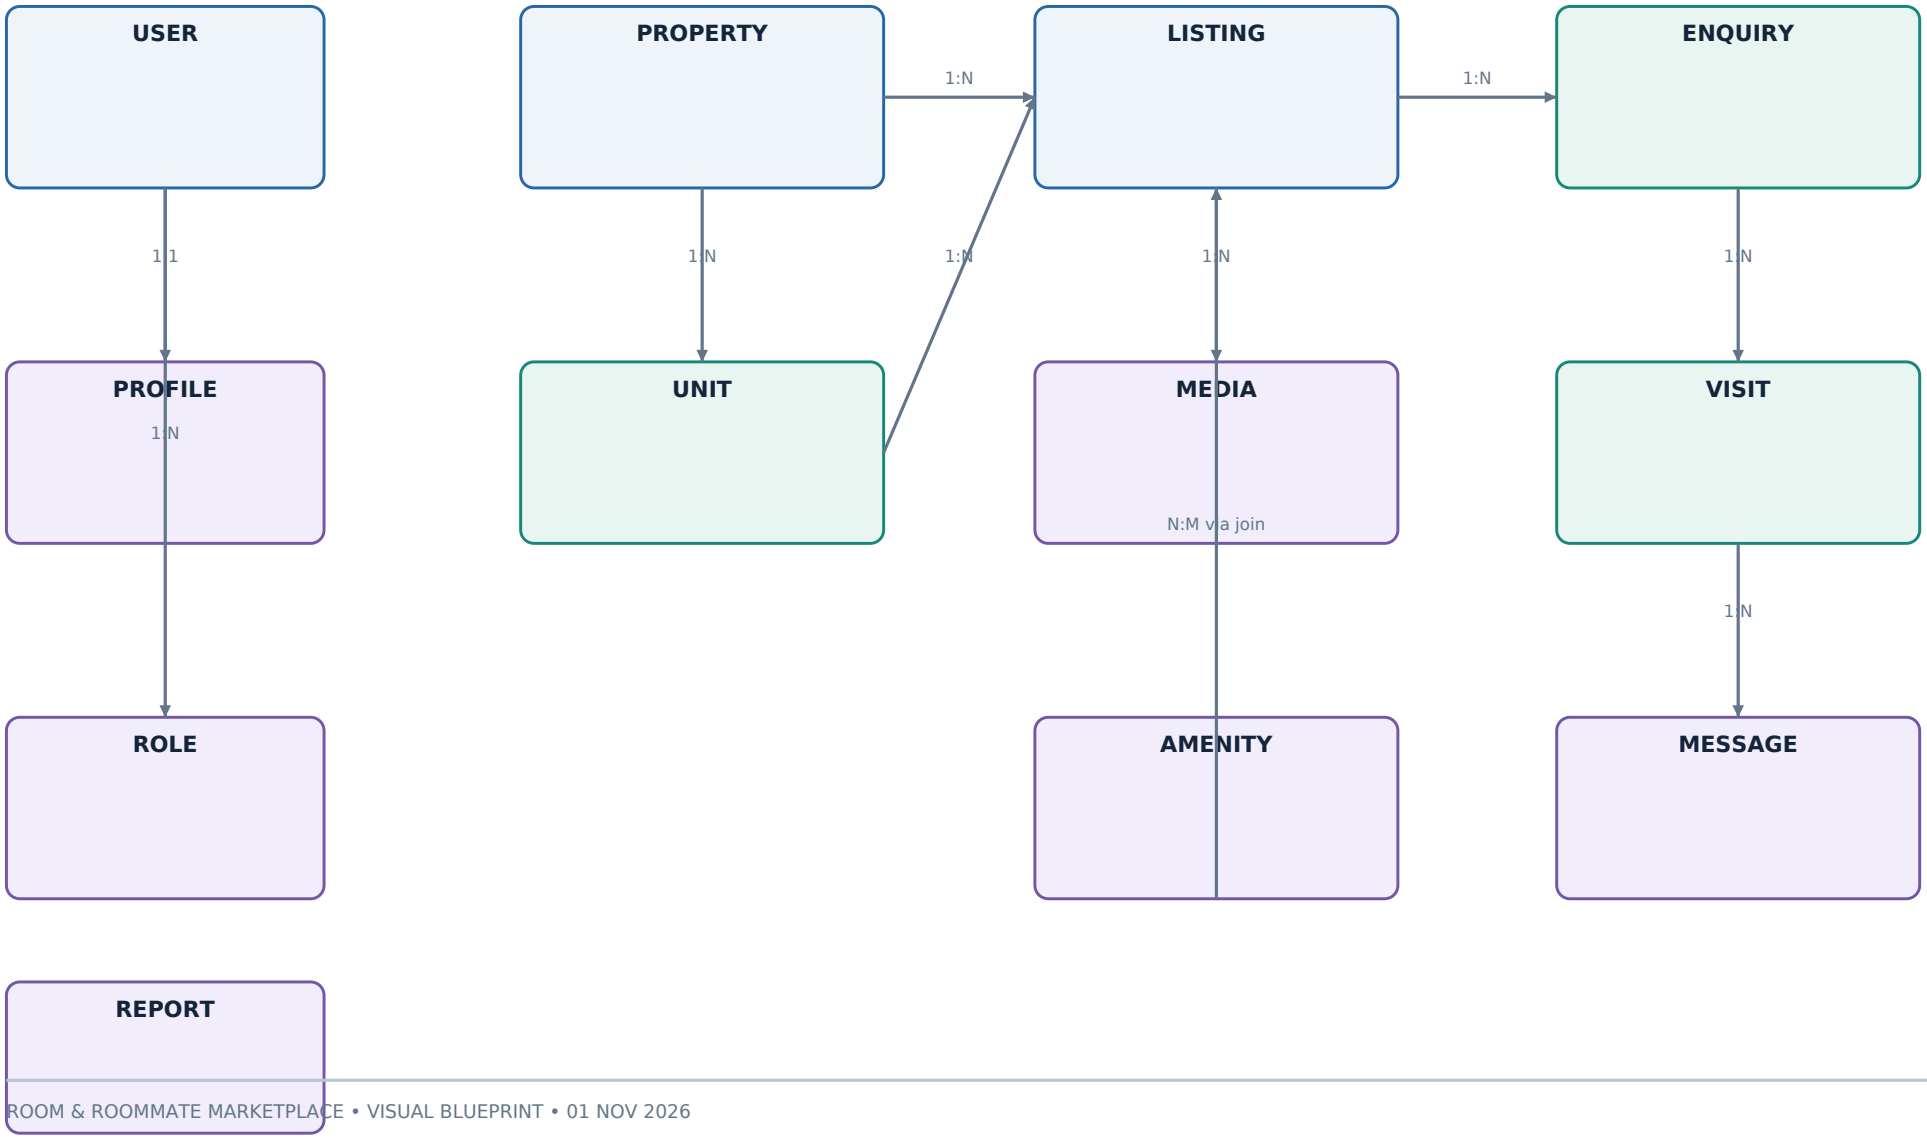

A phone-verified account is not automatically an owner-verified listing. Authority evidence is a separate review.

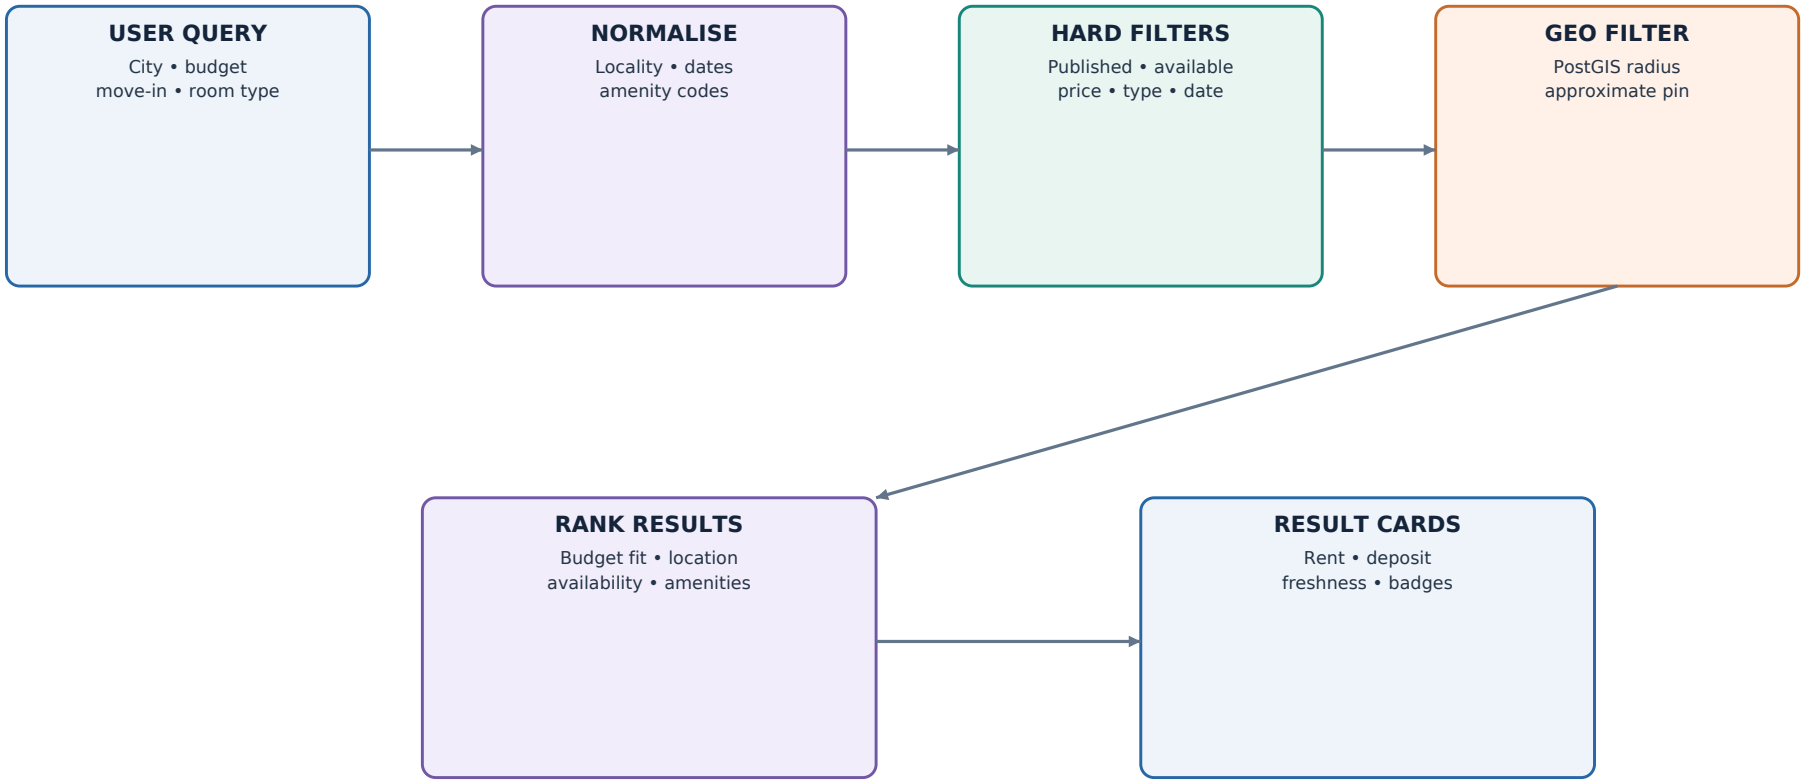

Only PUBLISHED + available + not expired listings may appear in public search.

Core idea: Property = physical place • Unit = room/bed inventory • Listing = public offer with current rent and availability.

07 | SEARCH & DISCOVERY PIPELINE

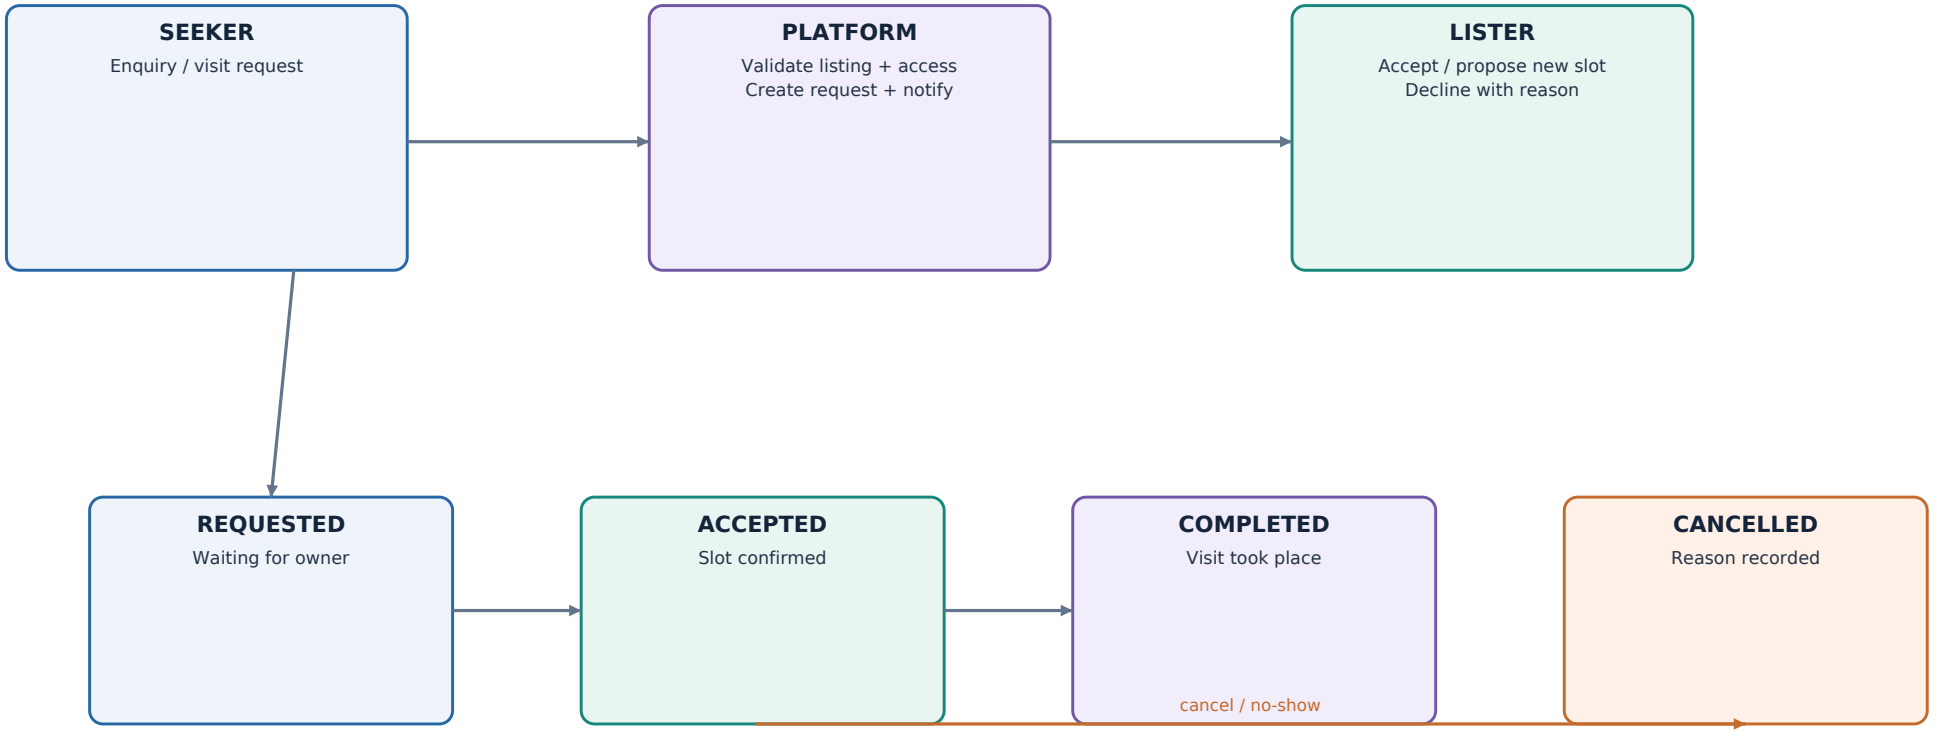

Filters, geo queries and explainable relevance

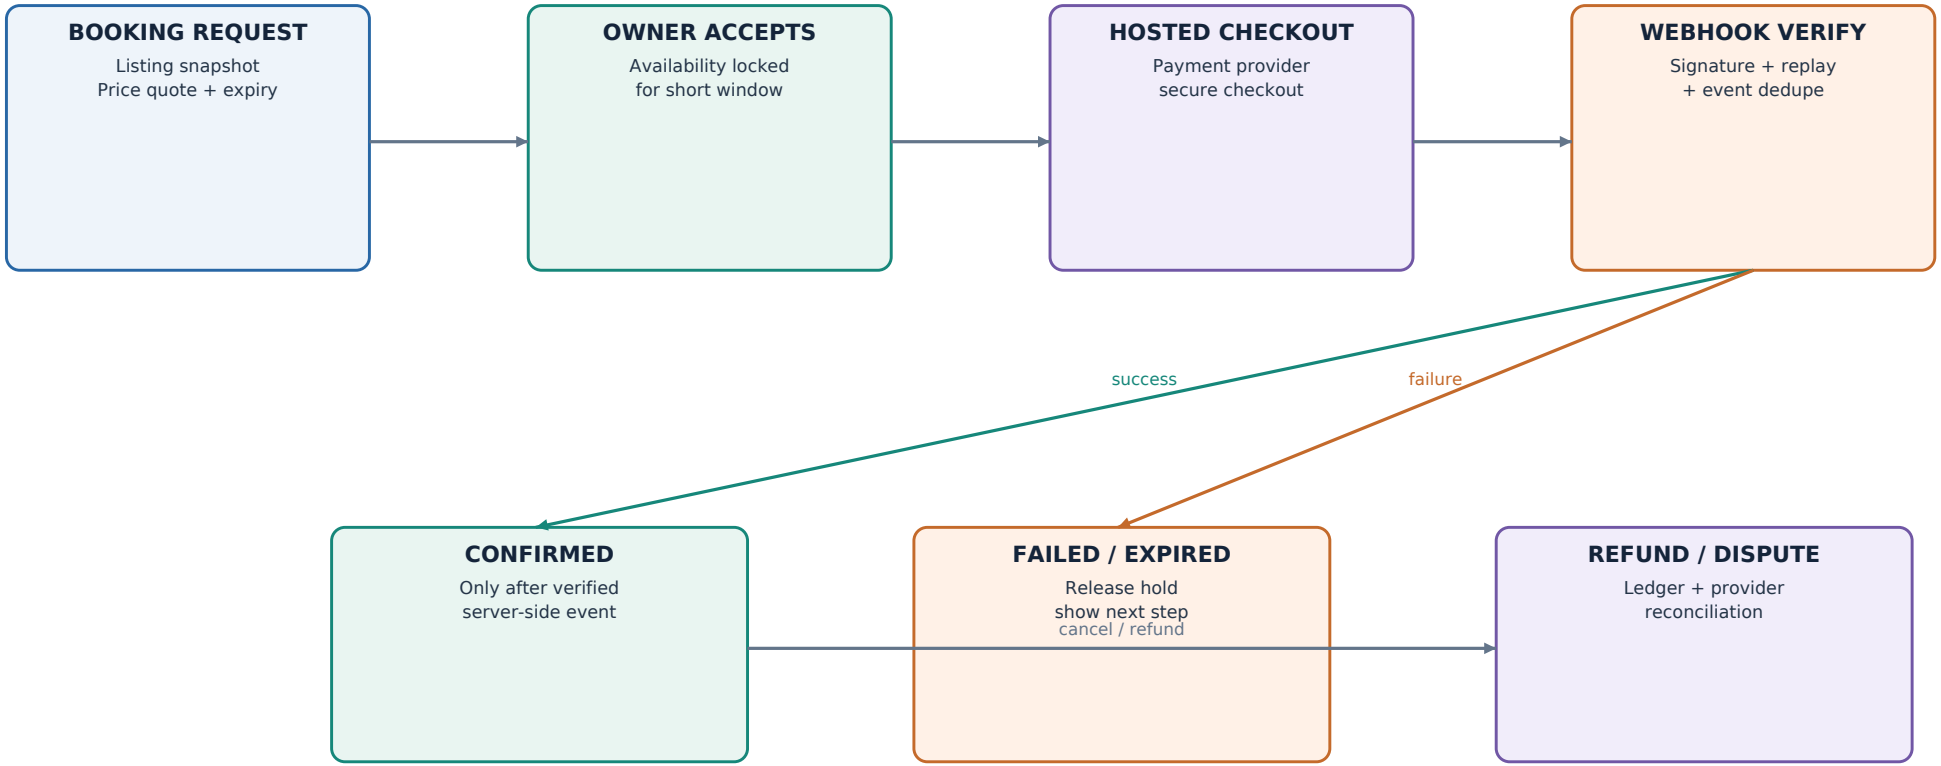

Use deterministic, explainable ranking first. AI recommendations can be added after real usage data exists; never infer sensitive traits.

PHONE VERIFIED Controls a phone number	**LIMITATION** Does not prove identity or ownership
IDENTITY CHECKED Identity claim checked by approved route	**LIMITATION** Does not prove property authority or future conduct
AUTHORITY CHECKED Evidence supports right to list	**LIMITATION** Does not guarantee title or property condition
LISTING REVIEWED Content checked against platform rules	**LIMITATION** Does not mean physical inspection
VISIT COMPLETED Participants confirm a visit	**LIMITATION** Does not prove lease or payment

Do not claim Aadhaar or DigiLocker integration until legal eligibility, approved provider/requester route, consent and data minimisation are confirmed.

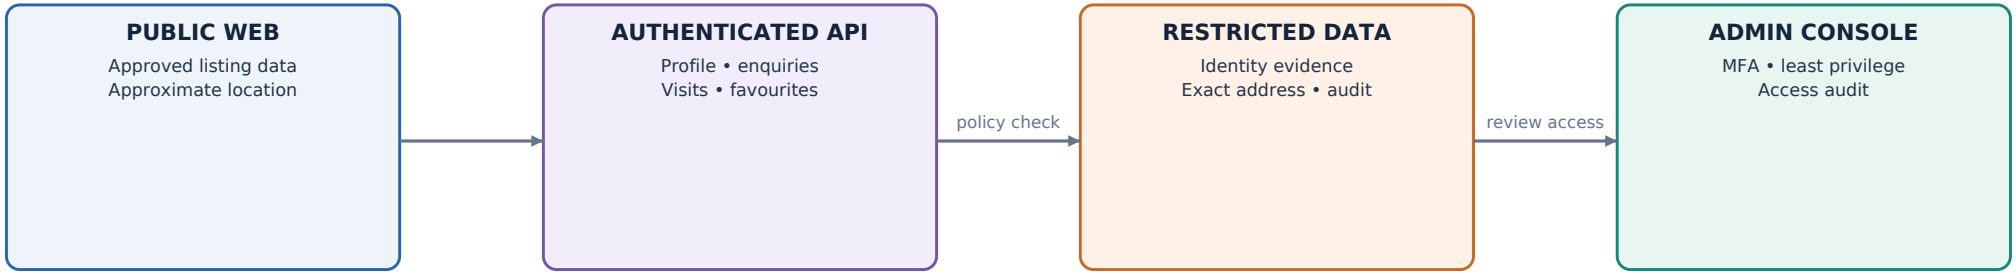

Phone number and exact address should be disclosed only under clear consent and access rules. Include block/report in every contact surface.

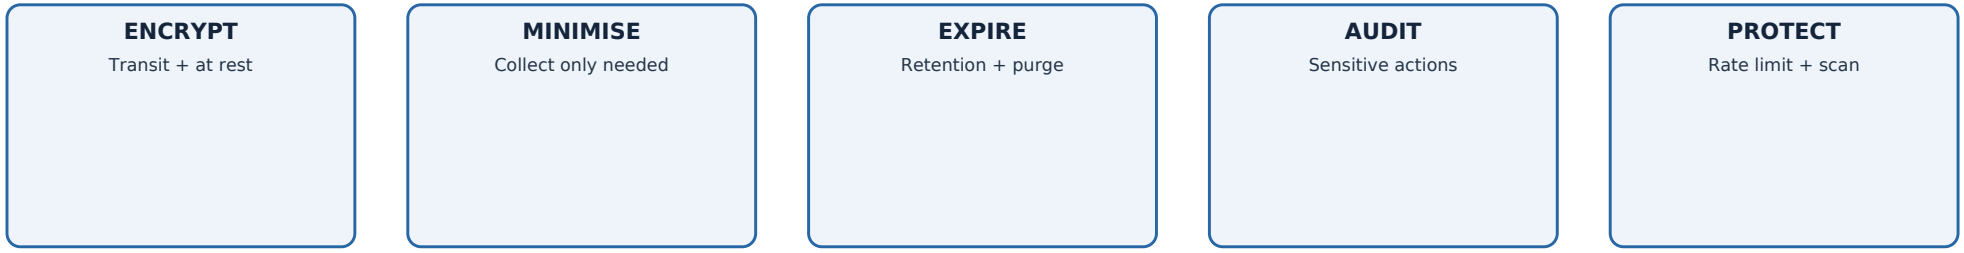

MVP recommendation: do not collect rent/deposits. Add hosted checkout only after payment-provider and legal review. Never trust browser redirect as proof of payment.

11 | SECURITY & PRIVACY BOUNDARIES

Where sensitive data lives and who can access it

Never log OTPs, tokens, Aadhaar numbers, identity documents or payment credentials. Keep the database and object storage private.

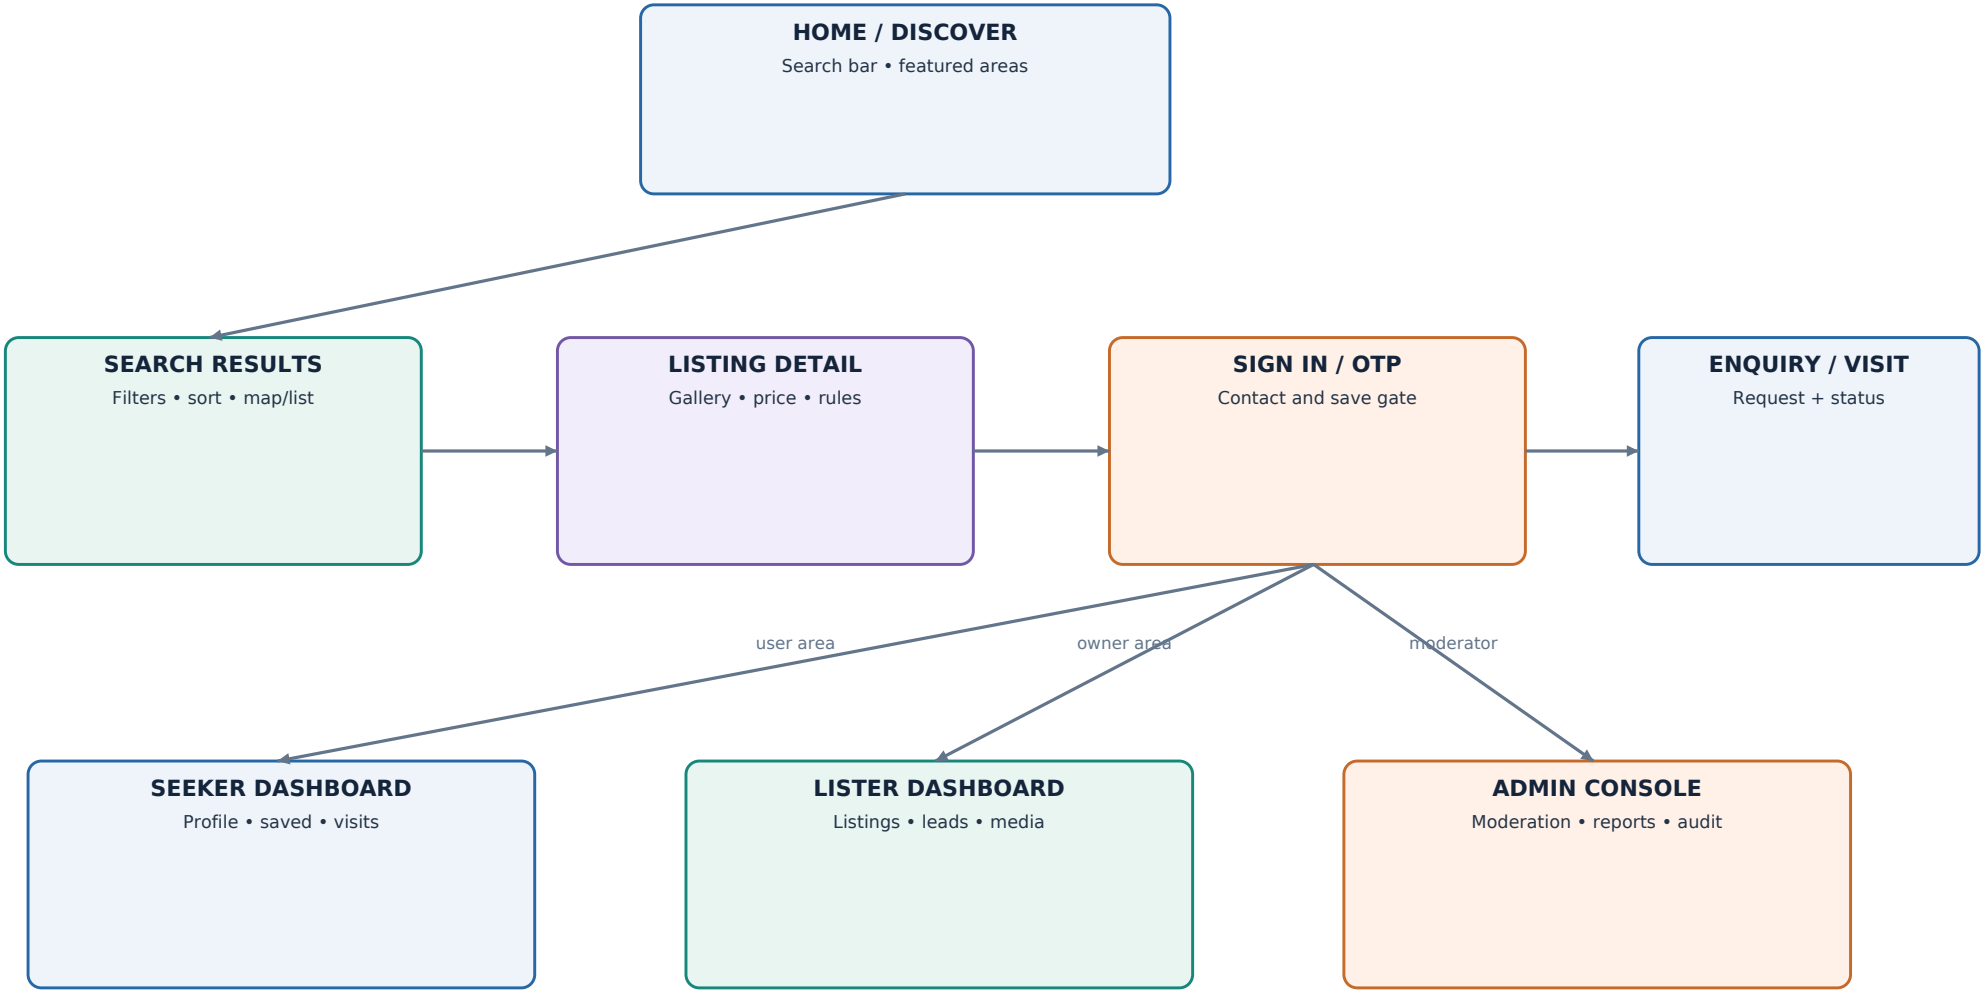

Pilot success: real available inventory, trustworthy listers, fast search, enquiry-to-visit conversion, low stale-listing and report rates.

MVP FIRST
Search • listing • trust

NEXT
Chat • saved search • maps

LATER
Payments • roommate AI

One user account can act as seeker and lister. Dashboard capabilities depend on role and resource ownership.

01

ONE ACCOUNT

Seeker + owner capabilities under one user identity.

02

MODULAR MONOLITH

One backend deployment with strict domain boundaries.

03

PROPERTY / UNIT / LISTING

Separate physical property, inventory and public offer.

04

TRUST BADGES ARE SCOPED

Phone, identity, authority and listing review are distinct checks.

05

PRIVACY BY DEFAULT

Approximate location publicly; exact address under controlled access.

06

PAYMENTS LATER

Do not hold funds or build wallet/escrow in the MVP.

07

HUMAN MODERATION

Evidence, reason codes, appeals and audit history.

08

EXPLAINABLE SEARCH

Hard filters first; transparent relevance signals.

Use this diagram pack alongside the detailed requirements document. This version intentionally contains no code listings.
